Git and GitHub guide

You will do these steps every time you make your changes on your branch

To save them in the GitHub repository on the main branch

• BEFORE YOU WORK MAKE SURE THAT YOU ARE IN YOUR BRANCH.

Step (1)

The first thing to do after opining VS code is going to your branch and the pull the main

git checkout hassain   // go to your branch

Enter   // press Enter

git pull origin main   // to be updated with the main branch

Enter   // press Enter

Step (2)

Work on the project

Step (3)

Add your work to the main branch and then go back to your branch

git add .   // to add all changes that you made

Enter   // press Enter

git commit -m ''test4"   // to put a comment about the changes that you made

Enter   // press Enter

git push   // to push the changes that you made on your branch to your branch

Enter   // press Enter

git checkout main   // to switch to the main branch

Enter   // press Enter

git pull origin hassain   // to pull your branch to the main branch because your branch the latest version

Enter   // press Enter

git push   // to push the main branch to the GitHub repo

Enter   // press Enter

git checkout hassain   // to go back to your branch
